CYCLED/INTERRUPTIBLE
AIR PROGRAM

SAVE MONEY AND ENERGY WITH LAKE COUNTRY POWER'S CYCLED AIR CONDITIONING PROGRAM AND CUT YOUR AIR CONDITIONING COSTS IN HALF!

Special rate or credit

The cycled air program is your opportunity to take advantage of a lower electric rate while keeping your home cool and comfortable. By signing up for the cycled air program, your air conditioner is cycled on and off every 15 minutes for up to six hours daily.

Your circulation fan can continue to circulate air in your home or cabin during "control" periods.

It's simple to convert either standard or high-efficiency central air conditioning units to the cycled air program. All you need is a radio control available from Lake Country Power. The radio receiver serves as a switch that controls the central air conditioners on the program and is mounted on your home or meter pole.

High efficiency air conditioners

High efficiency central air conditioners save you money over the life of the system by using less electricity to cool your home. This efficiency also reduces electrical demand for Lake Country Power and is designed to control peak electrical demand during hot weather.

Lake Country Power can provide you with a list of contractors who can install central air conditioning systems. Ask one of our member service representatives today!

System Requirements - Please refer to the Dual Fuel program guide.

Lake Country Power must have a way to turn on and off or "control" your AC, and you must have your system(s) properly wired to a separate meter. LCP will install a DRU (demand response unit) to be programmed for the load management control strategy.

- A separate meter socket wired by a qualified electrician.

**This program may require an additional meter.*

Rebates & Rates

Rebates may be available.
